

# ASSEMBLY INSTRUCTIONS For Knocked-Down Tables

1. Build table as if it lays on its side.
2. Insert one leg at a time, go through corners of table top and u-brace.

*Note: Open end of table leg is for adjustable feet.*

3. Adjust u-brace to desired height and tighten all set screws. (Use “turn of nut” method to tighten set screws; Tighten set screw until it contacts leg, then tighten  $\frac{3}{8}$  to  $\frac{1}{2}$  more turns.)
4. Insert adjustable feet.
5. Install optional tops (stainless or poly) and adjust feet on table.
6. *Optional Casters* require separate legs with welded inserts. Installation is the same.
