**INSTRUCTIONS FOR REPLACEMENT OF HASP ON SECURITY FENCE**

The eight (four on each side of hasp) stainless steel screws on the stainless steel hasp are installed at the factory with a thread locker (loc-tite 262). Removal of these screws will require each screw to be heated to release the thread locker. Heated screws can then be removed with a #2 phillips screwdriver or bit.

Replace hasp and use the stainless steel screws provided to attach. A thread locker on each screw is desirable for security.
