

DIVIDE & CONQUER FOR COOL SAVINGS

Divide and Conquer with New Age Security Fences.

Walk-in beer caves are becoming increasingly popular in convenience stores throughout the country. Since most of the beer sold in these stores needs to be kept cold, it makes sense to store it in the beer cave.

Save money by attaching a beer cave to an existing walk-in cooler.

If you already have a walk-in cooler, you can save money by attaching a beer cave to it. With New Age Security Fences, you can easily create a partition wall that separates your walk-in into two independent but attached coolers, with one cooler having a separate access door. These security fences can be quickly and easily installed using brackets bolted to the floor and ceiling of your walk-in.

By consolidating all beer and alcoholic beverages into one area, it becomes much easier for customers to find what they are looking for and grab it on the go. Instead of stacking cases of beer on shelves that can only hold a few cases, having all your inventory in one place makes it easier to know when you're running low and reduces restocking time for your staff.

Guaranteed Performance

Constructed from primary-grade aluminum, New Age Security Fences are guaranteed never to rust or corrode, making them ideal for use in refrigerated environments.

Aluminum Security Fences
Can Be Used In:

- Convenience Stores
- Supermarkets
- Bars and Restaurants
- Off-Site Kitchens

T-Bar Style Shelves are a popular choice for coolers and freezers. The unique T-bar extrusions allow items to slide on and off the shelves with ease while still providing maximum airflow.

Individual Standard T-Bar shelf weight capacities = 900 lbs.

NOTE: When requesting a Security Fence, we need the **WIDTH & HEIGHT** of the opening for the fence along with the **HINGE POSITION** (left or right) if you are needing a door.

If special conditions such as a Ceiling Mounted Condenser or some other objects are present that would require the fence to be modified, those dimensions will be required as well.

Each fence is quoted separately to ensure a proper fit and seamless installation.

This security fence system is specifically designed for a Northeastern Food Hall. It divides a commercial cooler/freezer into five separate bays, which helps to reduce the additional cost of having five separate coolers. Each bay has a fence section with a door and is divided by two slatted fence panels.
