

Aluminum Reduces The Overall Weight By 1/3 Compared To Traditional Steel Cages.

New Age **Order Picking Cages** are specially designed to improve efficiency when used with an order selector in distribution centers. The cages are constructed from lightweight aluminum, which reduces their weight by one-third when compared to traditional steel cages. The shelves of the cage are easy to remove and adjust, which makes them suitable for companies that offer a wide range of products in different sizes.

Unlike other picking cages that are constructed using solid, welded shelves; New Age **Order Picking Cages** have quick change, angled, and adjustable shelving, which saves time and improves utilization capabilities. This feature makes these cages more adaptable to fit changing needs and applications, making them the preferred equipment among distribution centers. The lightweight and easy-to-use cages are not only efficient but also versatile, which makes them an ideal investment for any company that values productivity and adaptability.

98852C

- **Replaceable oak block** allows order picker to securely grab the cart.

- **Removable shelves** with anti-slip tape keep boxes from sliding during transport.

- **Shelves are easily repositioned** and angled for product retention..

Watch A Brief Product Demo

New Age Order Picking Cages lightweight yet incredibly durable. Their versatility allows for easy movement without sacrificing strength.

An order picking process is more accurate and time efficient than other retrieval methods because it allows workers to select specific items instead of entire pallets of inventory.

New Age offers a range of customizable features to optimize warehouse operations:

Push Handles: Designed for easy movement in tight spaces, enhancing user control.

Load Capacities: We design our carts and platforms to meet your specific load capacity requirements.

Dimensions: Engineered to size to ensure safe picking and handling, even in narrow aisles.

Safety Cages: Essential for operator safety, especially when handling high-rise tasks.

Adjustable Shelving: Offers flexible storage solutions to accommodate various item sizes, boosting picking efficiency.

Tow Hitches: Enable seamless integration into train systems.

Casters and Wheels: Tailored for optimal movement across different floor surfaces, ensuring smooth transport of goods.

Customize these features for your warehouse to improve efficiency, safety, and flexibility in order-picking.

Removable Shelves

- Flip shelves up, out of the way or remove them completely.

Steel Order Picking Platforms can weigh 800 lbs. or more, making them impossible to move manually.

Aluminum Order Picking Platforms weigh less than 300 lbs and can be easily maneuvered without machinery.

DWG50854

Towable

- Drop down tow hook.
- Floor brake.
